

SAN Convectur Furnace Type KO

Application:

The SAN convectur furnaces KO are especially designed for heating of church interior and are mounted below the benches or in convectur pits. The construction fulfils the Danish government circular from the Church Ministry of Aug. 10th 1993 concerning implementing and use of church heating systems.

The convectur furnace type KO is manufactured from powder painted steel plate, stainless tubular heating element and with fittings or legs for mounting under bench or on floor in convectur pit respectively. Silent operation.

Can be delivered with tubular heating element for 3 power steps (1/4 - 1/2 - 1/1).

Power: Approx. 400W/m
 Voltage: 230V, 400V or 3x400V
 Max length: 2400mm
 Colour: grey RAL 7032
 Protection class: IP 22
 Surface temperature: 65°C

Other length, power as well as colour are available upon request.
